Radioactive drugs strike cancer with precision.

The tumor-seeking radiopharmaceuticals are charting a new course in oncology, with promise for targeted treatments with fewer side effects.

By [Elie Dolgin](#) 06.13.2024

I hope you've had a great Independence Day.

How about an easy to read article about the evolution of radiological drugs that can both target and treat cancers and in our case prostate cancer? These drugs seek out and treat metastatic tumors while leaving healthy cells alone resulting in a greater chance of progression free survival and lower side effects. Click on the link above to find out more.

If this topic catches your interest, be sure to pull up the following presentations about theranostics on our website at www.ProstateForum.Org/Presentations.

22-01 "Theranostics" with Dr.'s Auerbach and Calais of University of CA Los Angeles Geffen Medical School

21-01 "Radioligand Guided Imaging" with Nat Lenzo, M.D. in Australia.

20-09 "PET/CT Imaging and Theranostics" With Dr.'s Auerbach and Calis of the University of California Geffen Medical School

20-01 "PSMA and Personalized Cancer Care" with Frankis Almaguel of Loma Linda Medical Center.

I look forward to seeing you at our support groups on the 2nd and 4th Tuesdays at 5:00 p.m. Pacific and at our presentations. Sign up for email announcements at www.ProstateForum.org/join

Warm regards,

CKM
